

Netflix Business Insights Report

Task 6 | Data Analysis Using Python Internship, Auspify Technologies

Dataset: Netflix titles added between January 2008 and 25 September 2021

8,786	69.7%	85	+9.9%
Titles analysed	Movies (30.3% TV Shows)	Countries	Titles added, 2021 vs 2020 (same Jan-Sep window)

Executive summary

Netflix's catalogue is large, international and still growing. This report combines exploratory analysis, three visual dashboards and six data-backed recommendations. Three shifts stand out: the catalogue is moving **towards TV Shows**, **towards US-sourced additions** since 2018, and **towards older titles** in the library.

Key findings

- **Growth has not stalled.** Compared over the same 1 January to 25 September window, titles added rose from 1,363 (2020) to 1,498 (2021), +9.9%. The full-year 2021 figure only looks lower because the data ends in September.
- **TV Shows are growing fastest.** TV Show additions rose 20.5% in 2021, against 5.2% for Movies.
- **The mix is concentrating.** The US share of additions rose from 31.7% (2018) to 41.5% (2021), and the top 3 countries supply 58.1% of the catalogue.
- **Long-running series are scarce.** 67.2% of TV Shows have only one season; just 17.0% have three or more.
- **The library is ageing.** The share of titles added within a year of release fell from 65.7% (2016) to 50.8% (2021).

1. Catalogue overview

Dashboard 1: Catalogue Overview

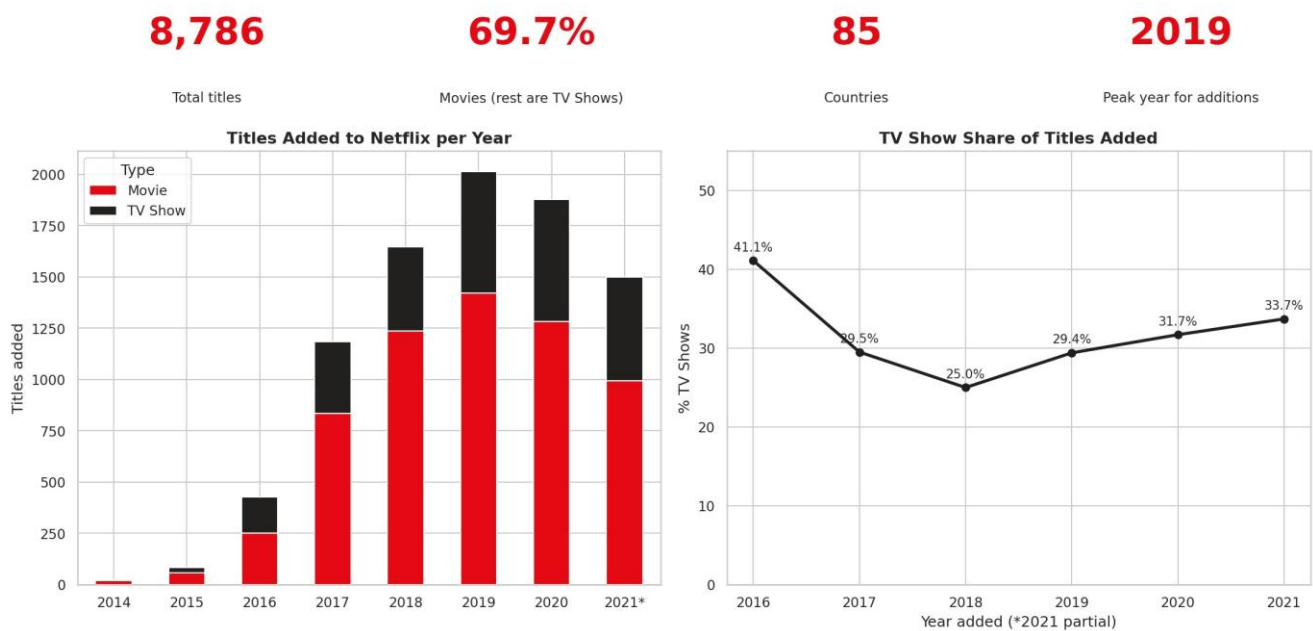

Figure 1: Titles added to Netflix per year, and the TV Show share of additions. *2021 covers 1 January to 25 September only.

- Additions grew every year until a peak of **2,013 titles in 2019**, then fell in 2020 (1,879).
- The 2021 bar (1,498) is a partial year, so it is not comparable with full years. Measured over the same window in each year, 2021 is the highest on record:

Added 1 Jan to 25 Sep	Movies	TV Shows	Total	Total vs prior year
2018	836	260	1,096	+30.3%
2019	931	407	1,338	+22.1%
2020	944	419	1,363	+1.9%
2021	993	505	1,498	+9.9%

- **TV Shows' share of additions** fell to 25.0% in 2018, then recovered to 33.7% in 2021 (Dashboard 1, right).

Supporting trend: shifts since 2016

Measure	2016	2018	2021	Direction
US share of titles added	41.7%	31.7%	41.5%	Rising since 2018
Titles tagged "International"	39.2%	53.6%	42.5%	Falling since 2018
Added within 1 year of release	65.7%	54.8%	50.8%	Falling
TV Show share of titles added (2021 to 25 Sep)	41.1%	25.0%	33.7%	Recovering

2. Content strategy

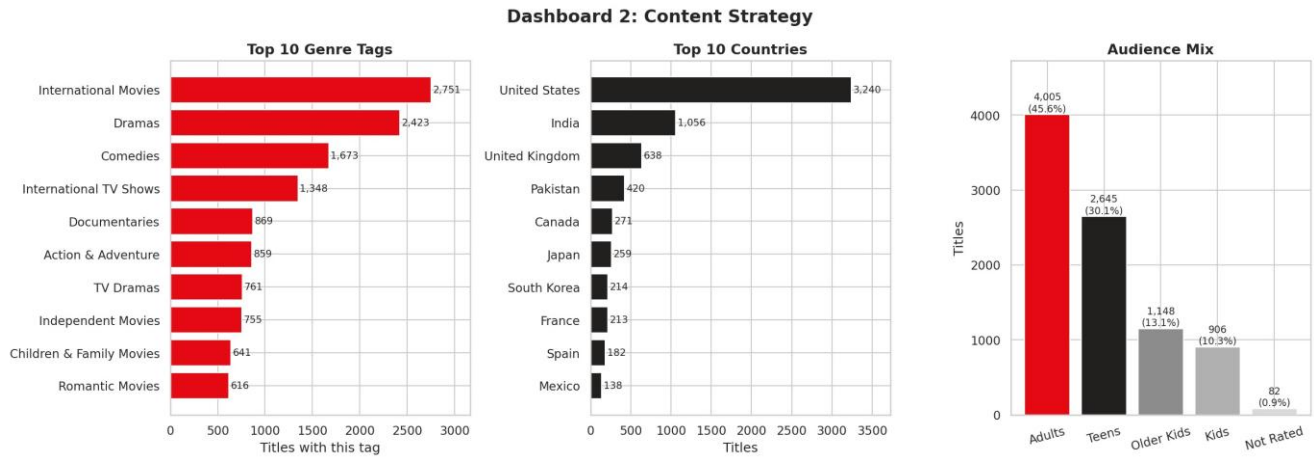

Figure 2: Top genre tags, top countries and audience mix. Genre tags overlap (about 2.2 per title), so genre counts do not sum to the catalogue total.

- **Genres:** International Movies (2,751 titles, 31.3%), Dramas (2,423, 27.6%) and Comedies (1,673, 19.0%) lead.
46.7% of all titles carry an "International" tag.
- **Countries:** the United States supplies **38.1%** of titles with a known country, followed by India (12.4%) and the United Kingdom (7.5%). Pakistan, South Korea and Japan are strongly series-led (83.1%, 77.1% and 66.4% TV Shows).
- **Audience:** Adults make up 45.6% of titles and Teens 30.1%. Kids content is 10.3% (906 titles) and is the only audience group where TV Shows outnumber Movies (51.2%).

3. Format and freshness

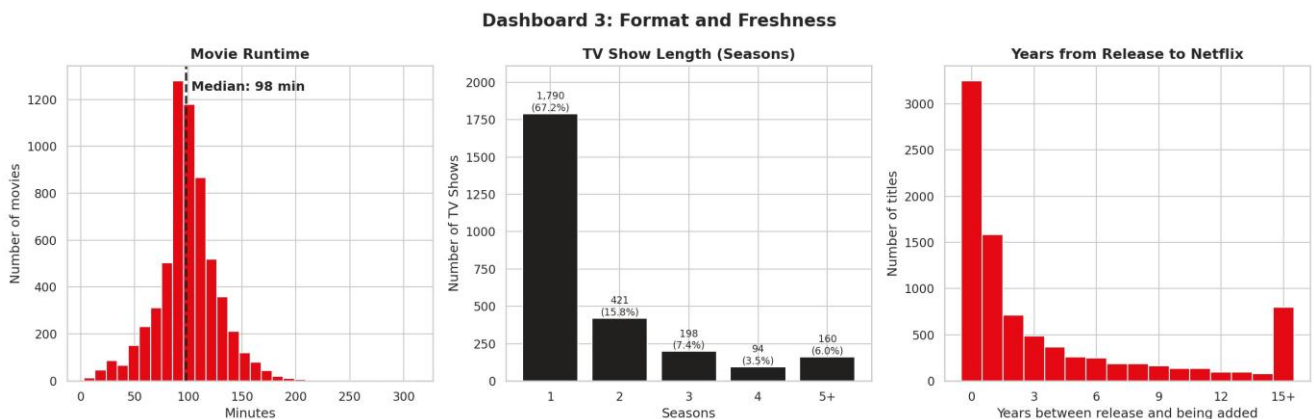

Figure 3: Movie runtime, TV Show length and years between a title's release and its arrival on Netflix (15+ grouped).

- **Movies** run a median of 98 minutes (mean 99.6), a tight, bell-shaped distribution.
- **TV Shows** are short-lived: 1,790 (67.2%) have one season and only 452 (17.0%) have three or more. Shows released since 2019 look similar (65.0% single-season), so this is not only a matter of newness.
- **Freshness:** the median title reached Netflix one year after release. 55.0% arrived within a year, while 15.3% arrived 10 or more years after release.

4. Insights and recommendations

Each insight states the evidence, a recommended action and a caveat. Recommendations are hypotheses based on catalogue data.

#	Insight	Evidence	Recommended action	Caveat
1	Catalogue growth has not stalled	Same-window additions: 1,338 (2019), 1,363 (2020), 1,498 (2021), +9.9%	Report additions like-for-like; do not treat the 2021 dip as a decline	2021 data ends 25 September
2	TV Shows are the growth engine	2021 TV Show additions +20.5% vs +5.2% for Movies; TV share of same-window additions 23.7% (2018) to 33.7% (2021)	Keep shifting commissioning towards series; track watch time per title	Supply is not demand
3	The international mix is narrowing	US share of additions 31.7% to 41.5% (2018 to 2021); "International" tag 53.6% to 42.5%; top 3 countries = 58.1%	Commission in mid-sized, series-led markets (South Korea, Japan) to reduce dependence on a few suppliers	One country per title; co-productions credited to one
4	Long-running series are scarce	67.2% of TV Shows have one season; 17.0% have 3+	Prioritise renewals and multi-season franchises to retain subscribers	Some are limited series by design
5	Kids content is small but series-led	Kids = 10.3% of titles vs Adults 45.6%; Kids TV Shows 51.2% of Kids titles	Test expanding family and kids series for repeat, household viewing	Hypothesis; no demand data
6	The library is getting older	Added within 1 year of release: 65.7% (2016) to 50.8% (2021); 15.3% added 10+ years after release	Review the balance of new releases vs library content	Originals vs licensed not identified

Suggested priorities

- **Now:** adopt like-for-like reporting for additions (Insight 1) so partial years are never read as declines.
- **Next:** link catalogue data to engagement data to test Insights 2, 4 and 5 (series, renewals, kids content).
- **Later:** set diversification targets for non-US content and for the new-release share of additions (Insights 3 and 6).

5. Method and data notes

Cleaning (Task 1). Missing values were hidden as the text "Not Given" (2,588 directors and 287 countries in the raw file). They were labelled "Unknown" rather than dropped. Whitespace was stripped before deduplicating, which removed 4 duplicate records (8,790 to 8,786 rows). Ratings "NR" and "UR" were merged into "Not Rated", and ratings were grouped into five audience categories.

- 287 titles (3.3%) have an unknown country and 2,587 (29.4%) an unknown director after cleaning. Unknown countries are excluded from country rankings.
- 14 titles show an added year earlier than their release year, likely advance listings. They were kept.
- Genre tags overlap, so genre percentages are "% of titles with this tag" and exceed 100% in total.
- Audience groups are derived from rating labels and are approximate.

- Earlier tasks (2 to 4) covered content type, countries and release-year trends; their headline results are reflected above.

Tools. Python, Pandas, NumPy, Matplotlib and Seaborn.
